## Measure Length

Teaching note: Two of the questions require children to measure; therefore, a ruler will be required and precise measurements might be dependent on printer settings.

1. fly = 6 mm; car = 5 m; pencil = 12 cm

2. 5 cm and 5 mm

3. A = The line is 4 cm and 5 mm long; B = The line is 6 cm and 3 mm.

4. I agree with Kavita because a sensible measurement for a fork would be 14 cm, not 1 m which would be too long.

5. No, Riley has not measured the leaf correctly because he has not placed the end of the leaf's stalk in line with the markings on the ruler. The end of the stalk should be placed in line with the 0 cm mark on the ruler, then measured.

6. Various answers, for example: shelf; chair; table. Ensure measurements are recorded accurately.
